Salt® ADAPTIVE
online compliance training

AMERICAN EXPRESS

Our Salt Adaptive eLearning platform helps American Express deliver great compliance training to its staff worldwide.

HERE'S HOW IT WORKS.

Adaptable

Salt Adaptive offers a unique training experience that can reduce training times for individual learners. This sophisticated system can identify learners' knowledge gaps and personalise training so that individuals only train in what they need to know, not what they already know.

It's mobile-responsive – it automatically resizes to any desktop, tablet or smartphone.

Learners can switch between different languages as they proceed through the training.

The light editing feature means that clients can apply small changes to content quickly, easily and cheaply.

The system can connect to most learning management systems (LMS), including Saba, CornerStone, SumTotal, Net Dimensions, Litmos, Docebo and Successfactors, and provides smart visualisations of user completion analytics.

Results

Salt Adaptive promotes **speed to competence** – American Express employees can become competent quickly in the training topics.

By cutting down on the overall length of training, clients like American Express can **reduce the opportunity cost** of excessive mandatory training hours.

The personalised training experience is **effective**.

The analytics tools offer key insights into staff learning and **assessment performance**.
